

You are to code the HTML5, CSS3 and JavaScript required to implement a single page for a web site for Lake Ukickee Soccer as described in this assignment. Your page must utilize a CSS 12 column grid and look exactly as shown here. A better quality screenshot is posted on Canvas.

Ticket Order Page

The order page is to look exactly as shown:

Some notes for this page:

- ✓ The “buttons” on the side and heading at the top which reads LAKE UKICKEE SOCCER use a **background color gradient** and possess rounded corners as shown.
- ✓ The “buttons” on the side are hyperlinks that are treated as blocks and include the soccer ball image (soccerbutton.png) and text.
- ✓ When the user hovers the mouse over these “buttons”, they change their background color to dark green and their text to white.

- ✓ All images used on this home page can be found on the course Canvas site
- ✓ Note the lines and borders that must be displayed as shown and can be better seen in the screen shot images found on the course Canvas site.
- ✓ The right side portion of the page shown here consists of image links and text links:

← You should code a hyperlink here to an online soccer equipment store

← You should code a hyperlink here to an online soccer novelty or gift store

← You should code a hyperlink here to <http://www.ukickee.org>

- ✓ The form is to be processed in Javascript, after the name and email address are validated. The form processing is to display in an area of the page that you choose, each date that the user selected together with the quantity of tickets specified for that date and the total amount owed for that date. The grand total amount owed is also to be displayed. All amount owed values are to appear as dollars and cents. Make sure that this displayed information is clear and “easy” to see (font color).
