Redo the two-page responsive website created in Homework Assignment #3 according to the following specifications:

1. Replace the CSS Grid with the Bootstrap Grid `col-` specifications as discussed in class.

2. Implement a **Bootstrap 5 Carousel** on devices with screen widths of 1200px or larger. The images to be used in the carousel are listed below and **must** be resized to the same size as the smallest of these images (so use some image sizing software such as Paint or Paint 3D):

   a. boat.jpg
   b. shrinkwrapped.jpg
   c. sunkenboat.jpg
   d. accessories.jpg

3. For screen widths of 800px through 1199px, simply display the logo image, rather than a carousel.

4. For screen widths less than 800px, do not display any images at all.

5. Implement a favicon for the website browser tab. You may use the anchoricon.png file, supplied in the downloaded images folder, if you so desire.

Implement a zip file containing ALL of your files (all images included) for credit on or before the due time.
